

Working together to keep our young people safe

In this month's issue:

- Sextortion
- Gaming
- App focus: Playstation and Xbox

Sextortion - what is it?

Sextortion is a type of blackmail in which the offender threatens to disclose sexual content, such as information, photos or videos of the victim, with the intention of extorting money from them. Another phrase used to describe sextortion is *'online sexual coercion and extortion'*.

How are children sextorted?

Individuals pretending to be children of the same age as the victim build a relationship with the young person over hours, days or even weeks. Once trust is established, the perpetrator begins to ask the young person for intimate images and videos. The victim sends the requested content, unaware that they are communicating with a criminal. Self-generated Child Sexual Abuse Material (CSAM) refers to instances where a child produces images or videos of themselves, or agrees to someone else creating content, such as through video calls. It is crucial to understand that in these situations, the child is coerced, manipulated or pressured into participating, making them a victim.

What are deepfakes?

With the capability to generate highly advanced AI images, children face increased vulnerability as criminals exploit fake images to extort them.

Deepfakes refer to AI-generated images where one person's face is substituted with another. These creations can be incredibly realistic, making it challenging to distinguish between what is genuine and what is fabricated.

The worrying part about AI-generated images is that the victim might never have shared any images with the perpetrator. However, due to fear and persuasion, they may agree to pay money to prevent the release of these fabricated images to friends and family.

Join us on Thursday 13th June for our **'Keeping our Children Safe in a Digital World'**

Online Parent Workshop
Thursday 13th June 5pm

Link to be sent out week commencing 3rd June.

Steps to take if your child is a victim of sextortion

SPOTLIGHT ON SAFEGUARDING

Gaming

Gaming encompasses playing games on various devices such as Xbox, smartphones, laptops, or computers. It is often a social activity where friends compete or play together. However, negative behaviours and consequences can arise from gaming. Some concerns include:

- excessive gaming leading to addiction
- playing games with inappropriate content
- sharing personal information
- interacting with unknown individuals, including adults posing risks
- cyberbullying
- in-app purchases leading to gambling
- displaying verbal or physical aggression
- poor eating habits
- sleep disturbances

These issues can impact children's mental health and relationships. It is crucial to monitor gaming to prevent excessive use, safeguard children's accounts and devices, and ensure games are suitable for their age and development.

PlayStation Network App

The PlayStation app enables users to remain connected even when they're not actively gaming. Users can share photos, videos and other content, as well as engage with online gaming communities. However, there is a potential risk of interacting with unfamiliar adults and encountering inappropriate content. Each child account includes parental control features. For detailed instructions on using these settings, visit the PlayStation website. [Click here](#)

Xbox App

The Xbox app allows users to connect with one another, continue gaming and join 'Parties'. Parties are when groups of players play alongside one another.

There are risks associated with 'Parties' which is that anyone can join, leaving young people vulnerable to having contact with unknown adults. All child accounts have safety features which allows parents to implement privacy settings as well as set time limits. [Click Here](#)
